

UNSEEN ENEMY

ONCE IT'S HERE, IT'S TOO LATE.

Screening and Special Talk Show Event at St. Luke's International University Graduate School of Public Health

Emerging and reemerging infectious diseases, such as the Ebola and Zika viruses and strains of influenza, have become global threats. In the globalized modern era, regional infectious disease outbreaks can quickly become worldwide pandemics, carrying enormous and devastating implications for global society, economy, and public health. In recognition, "Unseen Enemy," a documentary film released by CNN Films in April 2017, has been shown at the Beijing International Film Festival and at other similar events worldwide. In Japan, St. Luke's International University Graduate School of Public Health and the GHIT Fund will hold a screening of a condensed version of the film, accompanied by a special talk show featuring the film's writer and director, the man who discovered the Ebola virus, and Japanese senior government official responsible for global health. Discussion will focus on how each of us can contribute to pandemic preparedness. We look forward to your participation.
